

# THE HIGHEST STANDARD IN **POOL** **PROTECTION**

LATEST TECHNOLOGY  
IN **THERMAL POOL**  
**BLANKETS**

**THERMALSHIELD™**

Elite Thermal Shield blankets have been designed specifically for heat retention and are ideal when the ambient air temperature drops below the pool water's temperature.

## SAVE ENERGY

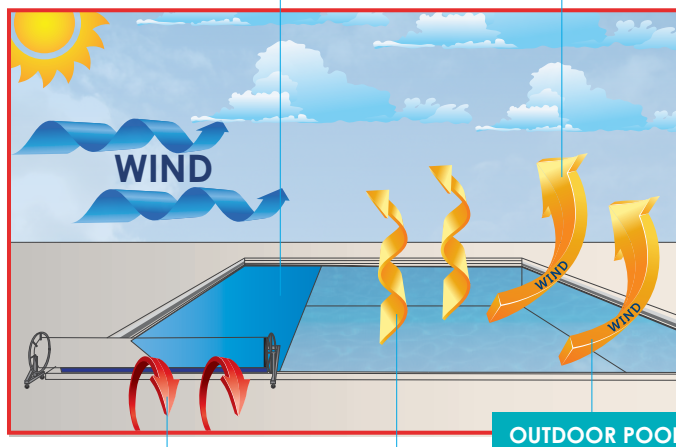

## SAVE WATER

**R VALUE 0.15Kw (5mm)**

The cover traps heat and prevents the warmth from escaping, saving up to 60% on your heating bills

Heat loss by evaporation and convection 60%

Heat and water is trapped in the pool

Heat loss by radiation into the air 30%

The higher the wind, the greater the heat and water loss

# ELITE THERMAL SHIELD™

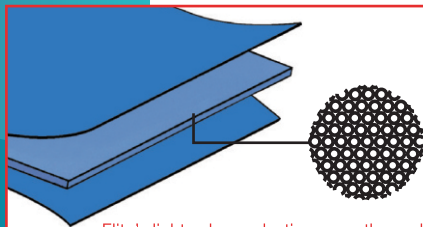

## DISCOVER THE REASONS BEHIND THE EXCEPTIONAL DURABILITY OF ELITE THERMAL SHIELD.

- Delivers more energy savings and a faster return on your pool blanket investment
- High R Value
- Longer lasting with a unique tough double water resistant outer membrane

Elite's 5mm Thermal Shield Blankets boast the highest R value available, providing optimal energy savings and maximizing your return on investment. Elite's 5mm Thermal Shield blankets feature the patented Airlon closed cell foam cores, effectively reducing water absorption by up to three times. It is important to note that blankets may become heavier and easier to tear in the case of high water absorption, resulting in decreased heat retention and a diminished long-term performance. Despite the higher cost of Airlon foam compared to standard foam, its long-term benefits result in a ten-fold return on investment, providing exceptional value for money!

Note: Elite's Thermal Shield has been tested to Australian and New Zealand's standards AS/NZ 4859.1

Elite's lighter, longer lasting more thermal efficient closed cell AIRLON foam core outperforms other conventional thermal blankets.

### ELITE THERMAL SHIELD™

Elite Thermal Shield™ delivers you more savings, a faster return and a much longer life on your pool blanket investment... Elite Thermal Shield™ has a higher 'R' value than most other blankets (the higher the R value, the more resistance to heat flow, the better your blanket performs), which means your pool will heat up quicker, stay warmer longer and best of all, be less expensive to operate.
